Subject: Requesting funds for drainage issues

Town Council,

I am the facilities manager at 94 A School Street in Danielson. Last year I wanted to pave my parking lot to start a five-year beautification of the property. It turned out to be a huge hassle with permits from the town to get the parking lots done. I want to get the ball rolling again so that I can get my upper lot paved located at Cottage and High Street. The town is supposed to put a culvert across cottage and then that would allow me to have most of my water runoff to cottage and bypass school street. School street has been flooding for a very long time during a major rain event. My shipping dock also floods when the street does.

I am requesting that the Town Council allocate funds to investigate the drainage issues on School Street, as well as Cottage during the current budget deliberations.
